

BUDI CAHYONO

Full Stack Developer | Software Engineer

budicahyono.dev@gmail.com | +6285769042975 | linkedin.com/in/budii-cahyonoo |
github.com/budichyn2003

SUMMARY

Full Stack Developer with hands-on production experience across the full development lifecycle: system architecture, database design, API development, frontend implementation, authentication, and deployment. Proficient in Next.js, React.js, NestJS, PostgreSQL, Prisma, and Docker, with experience building reusable, enterprise-style monorepo foundations (Turborepo, pnpm) for client projects. Experienced in integrating LLM APIs, RAG pipelines, and agentic AI workflows into production web applications, with working knowledge of automated testing (Jest) and CI/CD (GitHub Actions) for reliable, repeatable delivery.

EDUCATION

University of Lampung – Bandar Lampung, Indonesia
Bachelor of Informatics Engineering, GPA: 3.75 / 4.00

August 2021 – July 2025

EXPERIENCE

StackPlus Studio – Tangerang

January 2026 – Present

Full Stack Web Developer – Part-Time

- Develop and deploy production-ready full-stack applications, including HRIS, POS, LMS, and SaaS platforms, using Next.js, React.js, NestJS, PostgreSQL, Prisma, and REST APIs, with JWT authentication, reusable UI components, and database-driven business logic.
- Establish a reusable monorepo foundation (Turborepo, pnpm) for client projects, and set up automated testing with Jest and CI/CD pipelines with GitHub Actions to keep releases consistent across projects.

PT Informasi Teknologi Indonesia – South Jakarta

November 2025 – May 2026

AI Engineer – Intern

- Built end-to-end Retrieval-Augmented Generation (RAG) pipelines using LangChain and ChromaDB, covering document processing, embedding generation, vector storage, semantic retrieval, and REST API integration for internal AI applications.
- Developed Agentic AI workflows with OpenAI models and LangChain, connecting LLM reasoning with tools and multi-step execution to automate complex application tasks.

PT Gawai Mutu Digital – Bandar Lampung

August 2025 – November 2025

Software Engineer – Contract

- Developed Gawe Tani, a cross-platform web and mobile application built with React.js and Flutter, consuming Laravel REST APIs and implementing API integration and client-side data handling to improve data consistency and responsiveness.
- Implemented and supported a Hospital Management Information System (SIMRS) for end users, troubleshooting technical issues on the IT side, including BPJS registration problems, and assisting hospital staff to keep daily operations running.

Dicoding Indonesia – Bandung

July 2025 – September 2025

Facilitator – Contract

- Mentored 150 participants through hands-on projects and Google Cloud skill badges covering Artificial Intelligence, Machine Learning, Data Engineering, and Cloud

- Computing on Google Cloud Platform (GCP).
- Provided technical troubleshooting and implementation guidance for cloud-based AI workflows, data pipelines, and machine learning projects, helping participants complete practical assignments and labs.

University of Lampung – Bandar Lampung
Computer Laboratory Assistant – Contract

August 2023 – August 2025

- Coordinated practical programming and computer laboratory sessions for 450+ students, covering programming, data structures, operating systems, computer networking, and databases.
- Guided students through hands-on technical exercises involving software development, network configuration, database implementation, and information system security, providing troubleshooting support during laboratory sessions.

PT Sarana Digital Inovatif – South Tangerang
Front End Web Developer – Intern

March 2024 – July 2024

- Converted high-fidelity UI designs into responsive web interfaces (UI slicing) using Bootstrap, JavaScript, and TypeScript, implementing reusable components aligned with product designs.
- Developed frontend features with React.js and Vite, structuring component-based interfaces and optimizing the development workflow for better maintainability and application performance.

PROJECT

University of Lampung

January 2025 – June 2025

Face Recognition – Bachelor's Thesis

- Developed a face recognition system using FaceNet and PyTorch, training and fine-tuning the model on a custom dataset containing 5,000 facial images from 50 identities to generate discriminative facial embeddings for identity recognition.
- Evaluated and optimized embedding similarity thresholds for identity matching, achieving 99.68% accuracy under controlled evaluation conditions.

SKILLS

Hard Skill

Architecture	: Monorepo, Turborepo, Docker, CI/CD (GitHub Actions)
Backend	: NestJS, Express.js, Node.js, Laravel, REST APIs, JWT Auth
Frontend	: React.js, Next.js, Vue.js, Tailwind CSS, Bootstrap, Vite, Flutter
Database	: PostgreSQL, MySQL, Prisma ORM
Testing	: Jest
Programming	: JavaScript, TypeScript, Python, PHP, Golang, Java, SQL
Development Tools	: VS Code, Git, GitHub, Google Cloud Platform (GCP)
AI Integration	: LLM APIs, OpenAI API, RAG, LangChain, ChromaDB, Agentic AI

Language : Indonesian (native), English (proficient)

Soft Skill : Adaptability, Collaboration, Teamwork, Technical Troubleshooting
